## Our Trade Mark

Section of Kohler Ware with trade mark (actual size) in the enamel. Grinding at corner shows trade mark under surface of enamel.

The word KOHLER is our trade mark. It is permanently fused into the enamel in faint blue letters.

**IDENTIFICATION**—As a distinguishing mark it is found easily and quickly at all times.

**PREVENTION OF SUBSTITUTION**—It is unremovable and always in sight even after installation.

In addition to the trade mark in the enamel every piece of Kohler Ware has the word Kohler cast in raised letters on the under side or on the back of the article.

This mark guarantees that each article of which it is a part, is made in the world's largest enameled plumbing ware factory and that every fixture thus marked is of Kohler quality—the highest.

Location of trade mark on "Viceroy" bath tub.

It's in the Kohler Enamel

## KOHLER OF KOHLER

**K**OHLER OF KOHLER identifies an institution and a community, and suggests their intimate relation one with the other.

To a great and growing public, in America and abroad, KOHLER OF KOHLER also stands for the highest commercial attainment in one of the oldest arts known to man, the application of enamel to a metal surface, here exemplified in the manufacture of enameled iron plumbing fixtures of high quality.

If the name thus seems to have several meanings, they are nevertheless inseparably linked. For here, in a beautiful village of Eastern Wisconsin, near Sheboygan, a group of skilled and experienced men reflect in their product the unusual ideals and conditions under which they live and work. "He who toils here hath set his mark."

In some dim age of antiquity it was discovered that the beauty of the precious metals could be enhanced by the use of enamel and the practice thus suggested continues today. Meanwhile, the uses of the metals, and particularly of iron, had become better known. Not for ornament alone, nor for warlike purposes, but for a thousand peaceful ends, they had been found suited; vessels of iron, easily shaped, yet strong and lasting, marked one of the forward strides of civilization.

The day came when, like the metals, enamel was discovered to have a value other than for mere ornament. Its smooth, hard, clean surface, its imperviousness, its durability, suggested numerous uses, particularly for sanitary purposes.

The most notable progress in the commercial development of enamel has been made within comparatively recent times, and much of this progress is practically the history of Kohler of Kohler. The bath tub, lavatory and sink are necessary furnishings in every modern home. For these, white enameled iron has established itself as the most popular and satisfactory material, the material best adapted to successful manufacture.

The widespread preference for enameled iron fixtures is due largely to a Kohler achievement—the discovery of means of making every fixture white

## KOHLER OF KOHLER

Houses on School and Church Streets

rather than near white. And the smooth, white blanket of Kohler enamel, with its enduring luster, is easy to KEEP clean.

A day spent in the great Kohler factory reveals convincing reasons for the unusual excellence of Kohler Ware. An immense foundry is the starting point. Up in the cupola house you can see a powerful electric crane depositing loads of iron. Ordinary iron, it looks to be—but you will notice that it seems to be of several kinds, each of which is weighed out separately before being melted. The reason is that Kohler chemists have carefully analyzed each kind and have determined the exact proportion of each required for the best plumbing ware castings.

Gaze into the great cupola furnaces as they are mechanically charged with iron and fuel, their fiery depths roaring and pulsating with fervent heat! Then down in the room below, watch the steady stream of molten metal that pours out like a waterfall, fascinating and beautiful!

By means of conveyors, like a network of overhead railways, the melted iron goes to all parts of the foundry and is poured into the molds that have

Nature Theater, a Center of Recreation at Kohler

## KOHLER OF KOHLER

Kohler Co. Chemical Laboratories

been made ready. Presently there emerges from the mold a smoking, gray object, sandy and uninviting now, but about to become a graceful and immaculate Kohler fixture.

The process of molding, in the Kohler foundry, has been brought to a high degree of perfection. Fixtures that you have thought of as coming only in sections are here cast all in one piece, eliminating dirt-catching cracks and joints. Much of the molding is done by means of wonderful machines—machines made and patented by the Kohler Co.—with the result that the castings are made economically in quantity and have a uniformity otherwise scarcely attainable. In fact, the foundry throughout is equipped with wonderful devices that keep the molten iron and the completed castings moving on their way, eliminating much that would otherwise be costly and back-breaking drudgery.

The completed casting is placed on a slowly moving platform, until it reaches a special room where it is suddenly engulfed in a terrific sandblast.

When it emerges from this, it looks very different; all the sand has been removed, leaving the clean gray iron. It is then ground with an abrasive wheel to remove all roughness and unevenness. One more sandblasting, and it comes out smooth and ready for the enamel.

Remarkable as are the equipment and processes throughout the Kohler plant, the real secret after all is in the Kohler enamel. Ingredients, brought from Greenland, and from the far, strange places of the earth, are ground and mixed; fused in a fiery furnace until they become a heavy liquid that looks like cream soup; plunged suddenly into cold water where large, irregular

Drawing Molten Iron from Cupola

## KOHLER OF KOHLER

crystals are formed; dried; pulverized in great revolving cylinders—to come out at last a powder as smooth and soft and white as talcum. Something in the process has made the Kohler enamel better than ordinary enamel—some secret known only to the Kohler organization renders the enamel white, and smooth, and durable, giving to Kohler fixtures at once a distinction and a utility unique and characteristic.

As we pass through the Enameling Department, you will see that the castings are placed in glowing furnaces where they become red hot. Then for a moment they are taken out, and over them, by means of an instrument not unlike a flour sifter, the white powdered enamel is evenly sifted. For true enamel is not a paint, as you may have imagined. The smooth, glossy coat that every Kohler fixture wears is really a sort of opaque glass, formed by fusing this strange powder on the hot castings.

There are fixtures small and large, simple or pretentious; but the same enamel is applied to all of them, always with the same painstaking skill. Kohler fixtures are of one quality only, and that the highest. Only the best materials are used, though there are instances where, at some sacrifice of quality in the finished product, cheaper materials would do.

And now for one of the most important features. Your desire for Kohler fixtures may be disappointed unless you have the means of identifying them. The label pasted on them may be removed. The name is cast on the bottom of each, but you cannot conveniently turn a heavy bath tub over to see the name. So during the process of enameling, the name Kohler is incorporated in the enamel itself, in dainty blue letters, inconspicuous, unnoticed unless you are looking for it—but mighty important, just the same; a symbol of pride, a mark of responsibility, an assurance of worth. No other brand of enameled ware is thus identified; the mark is a sure means of knowing a Kohler fixture.

Pouring a Bath Tub Mold

Heating a Bath Tub in Oven for Enameling

The Kohler trade mark indicates that the article on which it appears is of the uniform Kohler standard. To maintain this standard every fixture is subjected to a rigid inspection

## KOHLER OF KOHLER

Enameling a Kohler Bath Tub

at each step in its manufacture, from the casting to the finished piece. The inspectors are under a chief inspector and independent of the foremen and superintendents. They thus exercise an independent judgment, instantly rejecting any work that is not up to the Kohler standard.

The quality of materials, the perfected technique, advanced processes, and high skill that characterize the manufacture of Kohler Ware; the unequalled quality of the Kohler enamel; and, finally, the permanently visible trade mark in the enamel, an exclusively Kohler feature — these leave little room for hesitation as to the kind of fixtures you should choose.

And Kohler Ware costs no more to install than inferior fixtures. Your architect or dealer will be able to give you further information, should you not see in this book exactly the fixture you wish. It is especially advisable that you endeavor to see a display of Kohler Ware — no description, no picture, even, can do it full justice.

Inspecting Kohler Ware

## KOHLER OF KOHLER

Kohler Automatic Power and Light 110 volt D.C.  
Model D, 1500 Watts

### KOHLER AUTOMATIC POWER AND LIGHT

The same exacting standards of quality that have for so long been associated with Kohler Ware, also mark another product of the same organization, Kohler Automatic Power and Light 110 Volt D. C., an electric generating unit designed for farms, summer homes and resorts, rural and traveling institutions of all sorts, and wherever electrical current is required.

The purpose of the Kohler Automatic, as of Kohler Enamelled Plumbing Ware, is to enable people *everywhere* to enjoy the comfort, convenience and increased efficiency that result from modern living conditions and modern equipment. There is no reason why, today, in the most isolated community, living conditions should be primitive.

In order that the Kohler Automatic may give exceptional service and satisfaction and may worthily uphold Kohler traditions, it is manufactured complete in our own factory. It embodies a unique combination of features, found in no other unit on the market, and protected by Kohler patents.

THERE ARE NO STORAGE BATTERIES with the Kohler Automatic, except a small automobile-type battery for starting the engine. Current is delivered direct from the generator. This is an important feature, for the usual large bank of storage batteries wastes current, becomes more inefficient with age, requires considerable personal attention, and is costly to replace.

STANDARD 110 VOLT CURRENT is generated by the Kohler Automatic. This permits the use of standard appliances, costing less than those of lower voltage. It also reduces the cost of wiring. To produce 110 volt current with batteries would require a bank of 56 large cells.

THE AUTOMATIC START AND STOP means that whenever you turn on any electrical appliance the engine starts automatically and generates the current you want. In other words, to secure current you do exactly the same thing as if you were getting your service from a central station. When

## KOHLER OF KOHLER

all your appliances are turned off, the Kohler Automatic stops itself. This feature, and the absence of batteries, reduces personal attention to a minimum—merely a renewal of oil, fuel and water once in a few weeks.

**SUITED TO EVERY NEED.** The Kohler Automatic is made in three sizes, of 800 watts, 1500 watts, and 2000 watts capacity. The unit can also be furnished for manual starting where desired. It can be arranged to operate on gasoline or on natural or artificial gas.

The Kohler Automatic is today in use on farms, in country homes, summer homes or resorts, churches, schools, country stores, garages and filling stations, ships, lumber camps, motion picture theatres, hospitals, hotels, factories, and many other places. Special literature and information are gladly sent to all who are interested.

**THE OPERATING COST IS KEPT LOW** by the automatic governor, which tapers the consumption of fuel according to the amount of current that is being used.

The Kohler Automatic is a triumph of modern engineering and manufacture. In scientific design, high quality of materials, and skilled workmanship, it is a worthy Kohler achievement.

With the Kohler Automatic, not only is it possible to have safe, bright, cheerful electric light, but the multitudinous tasks of both men and women can be relieved of much of their drudgery. The modern uses of electric energy are well known—best of all, perhaps, to those who have long wished that they might have it available. Important among uses is the pumping of water, which not only removes a burden of work, but points the way to a home made comfortable and sanitary by an installation of Kohler Enameled Plumbing Ware.
